^{177}Lu -PSMA-617 (Pluvicto)

PSMA-binding ligand

Chelator + Radionuclide

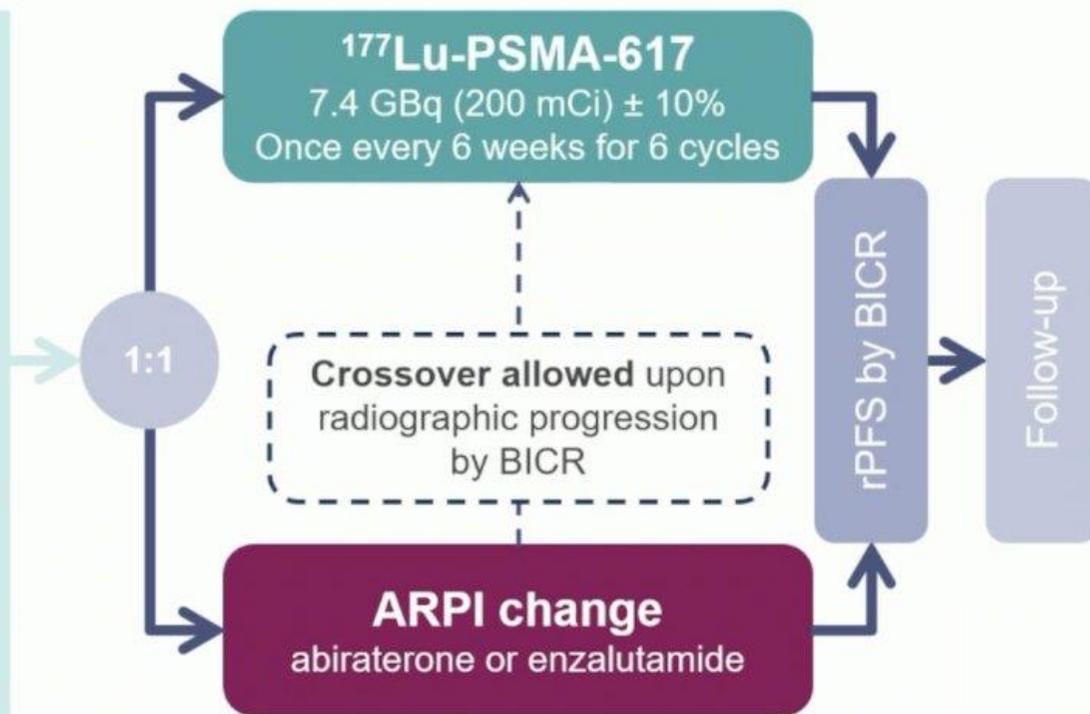

^{177}Lu -PSMA-617 in Castrate Resistant Prostate Cancer

□ PSMAfore Trial Design

Eligible adults

- Confirmed progressive mCRPC
- ≥ 1 PSMA-positive metastatic lesion on [^{68}Ga]Ga-PSMA-11 PET/CT and no exclusionary PSMA-negative lesions
- Progressed once on prior second-generation ARPI
 - Candidates for change in ARPI
- Taxane-naive (except [neo]adjuvant > 12 months ago)
 - Not candidates for PARPi
- ECOG performance status 0–1

MADRID 2023 ESMO congress

Stratification factors

- Prior ARPI setting (castration-resistant vs hormone-sensitive)
- BPI-SF worst pain intensity score (0–3 vs > 3)

177Lu-PSMA-617 in Castrate Resistant Prostate Cancer

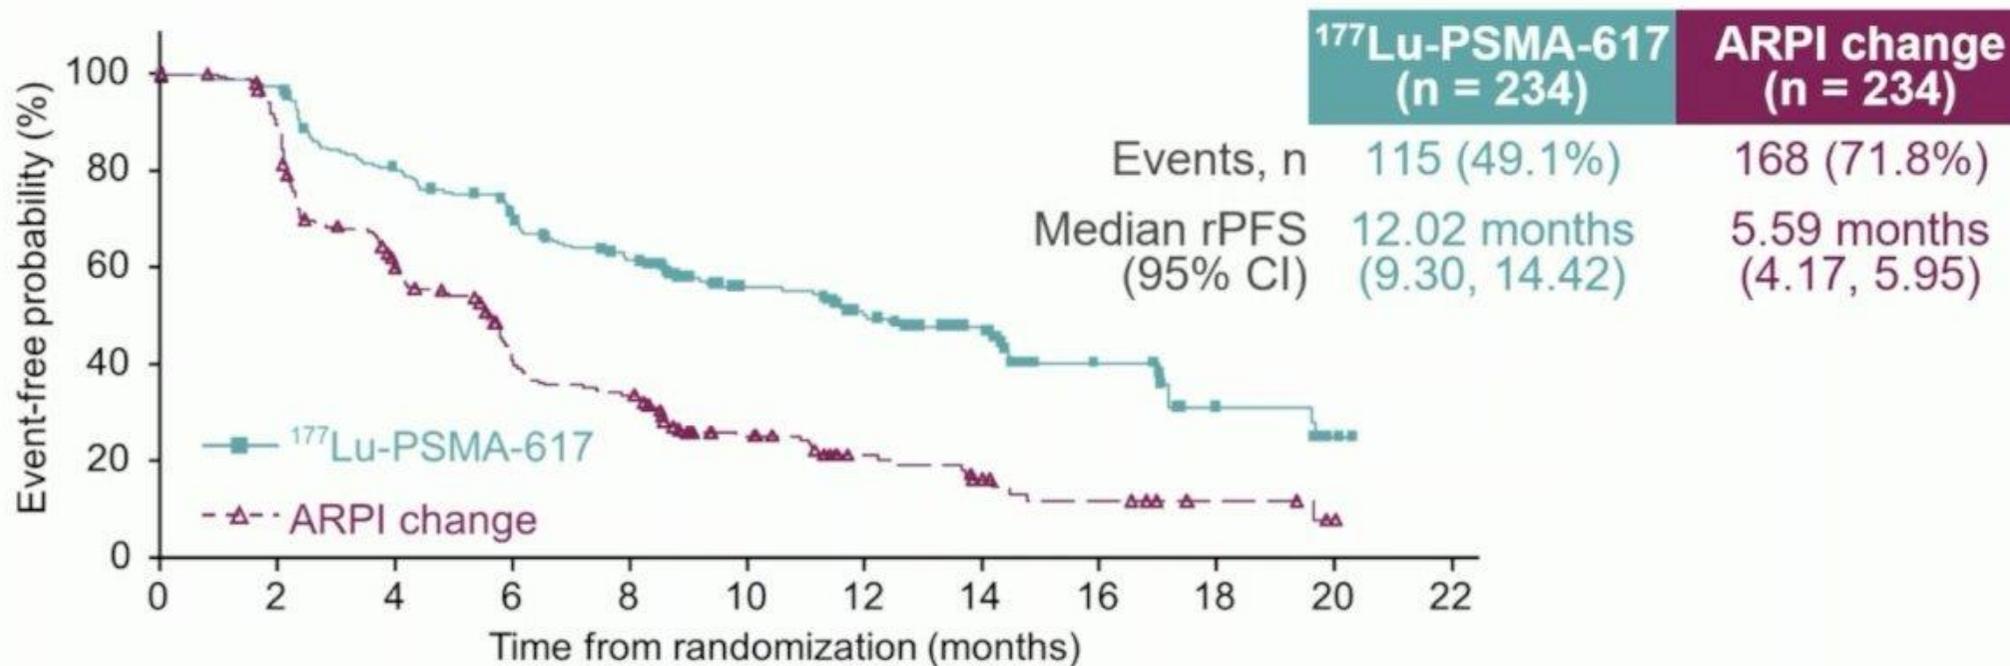

Baseline patient characteristics

OS analysis

| | ¹⁷⁷ Lu-PSMA-617 (n = 234) | ARPI change (n = 234) |
|--|--------------------------------------|-----------------------|
| Age, median (range), years | 71 (43–94) | 72 (53–91) |
| White, n (%) | 211 (90.2) | 214 (91.5) |
| ECOG performance status, n (%) | | |
| 0 | 146 (62.4) | 115 (49.1) |
| 1 | 86 (36.8) | 114 (48.7) |
| Gleason score 8–10, n (%) | 136 (58.1) | 107 (45.7) |
| PSA, median (range), µg/L | 18.4 (0–1197) | 14.9 (0–4224) |
| Hemoglobin, median (range), g/L | 128.0 (88–155) | 129.0 (88–156) |
| Alkaline phosphatase, median (range), IU/L | 100.0 (36–1727) | 103.5 (28–1319) |
| Site of disease, n (%) | | |
| Liver | 13 (5.6) | 7 (3.0) |
| Lymph node | 76 (32.5) | 74 (31.6) |
| Bone | 205 (87.6) | 203 (86.8) |
| Prior ARPI, n (%) | | |
| Abiraterone | 119 (50.9) | 130 (55.6) |
| Enzalutamide | 94 (40.2) | 84 (35.9) |
| Other | 21 (9.0) | 20 (8.5) |

177Lu-PSMA-617 in Castrate Resistant Prostate Cancer

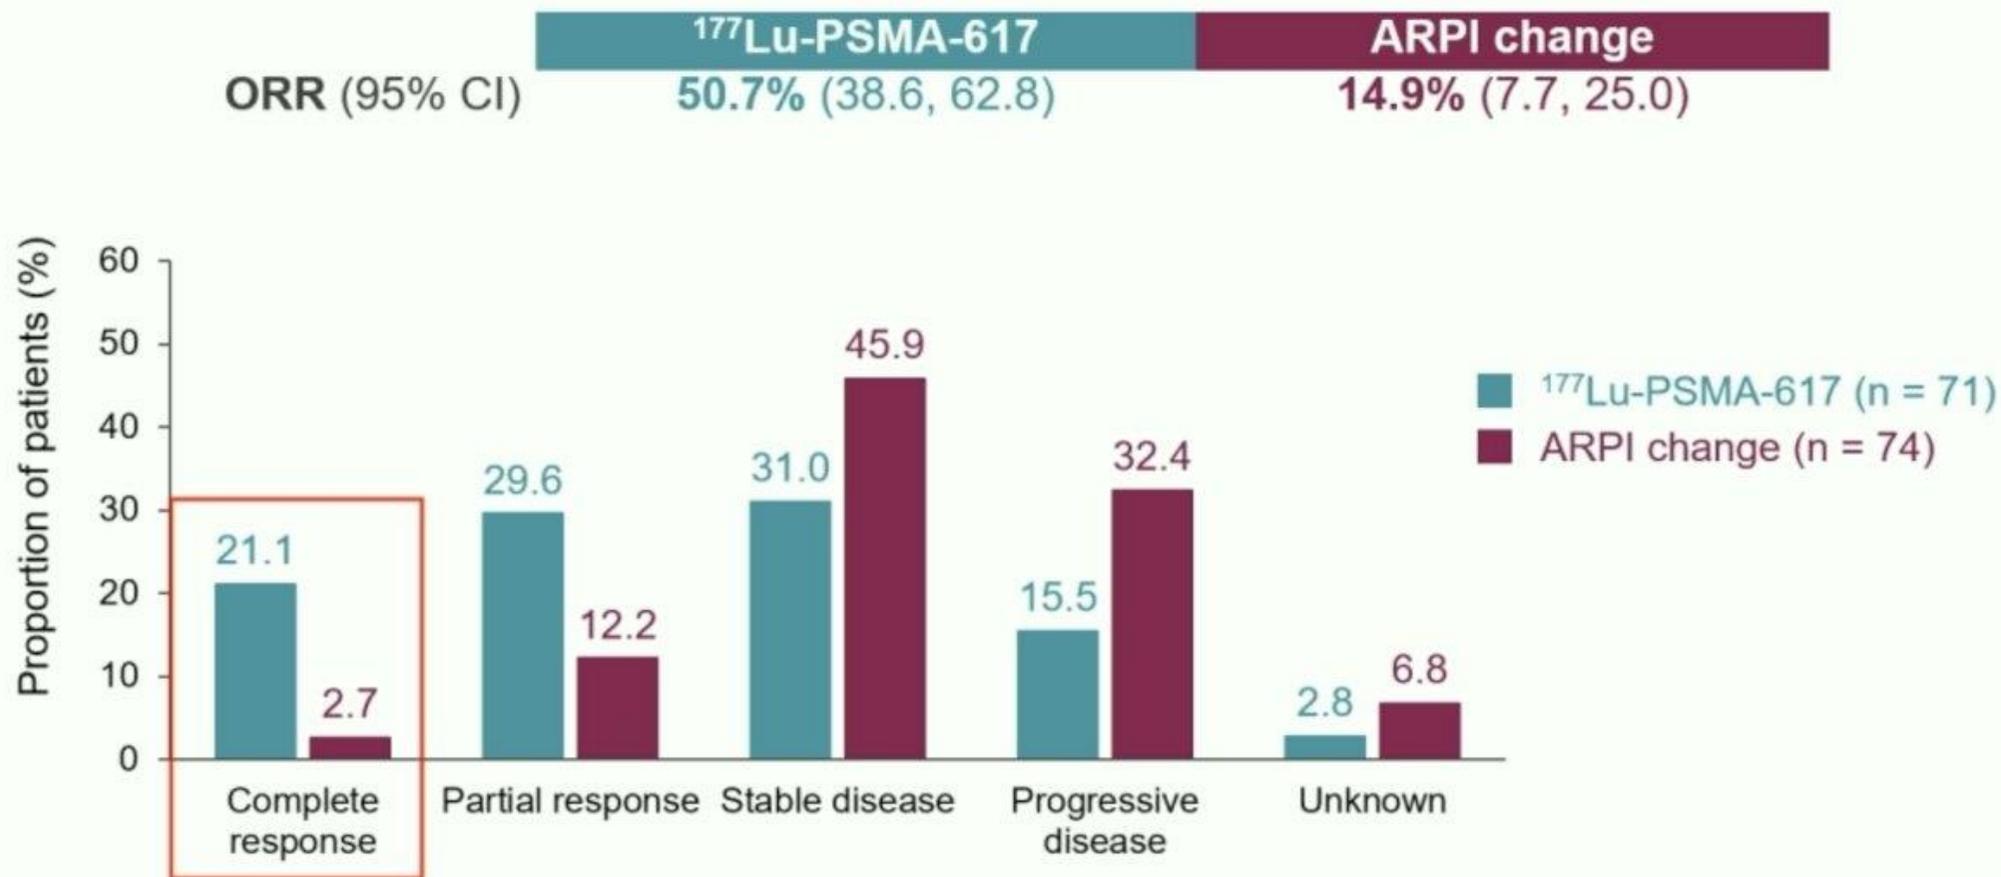

□ Primary Endpoint: Radiographic Progression Free Survival

Number of patients still at risk

| | | | | | | | | | | | |
|-----|-----|-----|-----|-----|----|----|----|----|----|---|---|
| 234 | 216 | 174 | 150 | 125 | 82 | 64 | 45 | 20 | 10 | 2 | 0 |

Time to symptomatic skeletal events – on study treatment

OS a

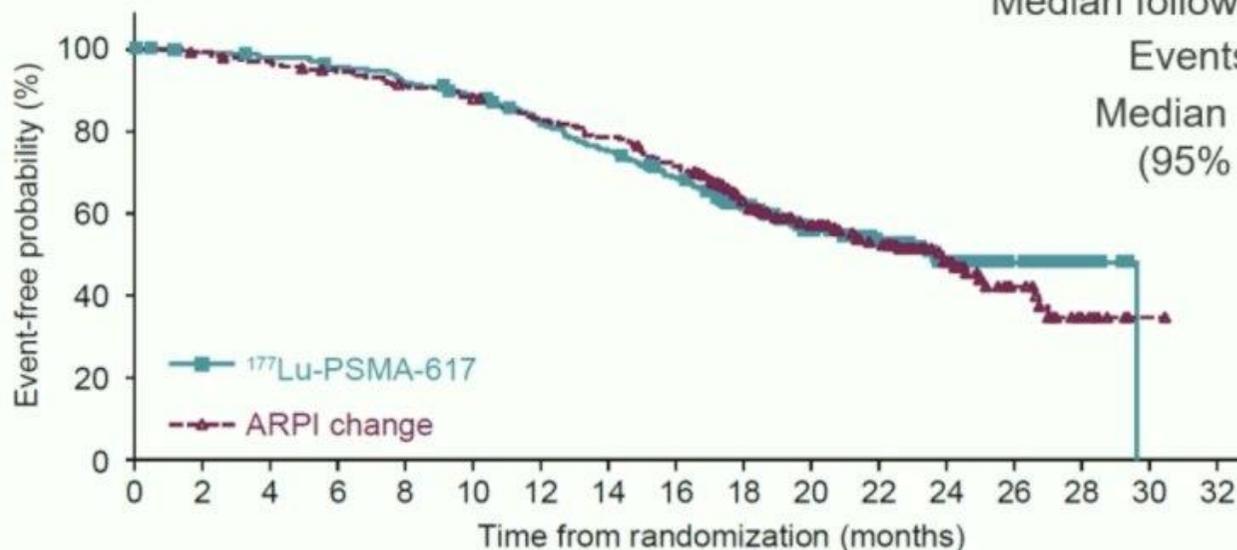

| | 177Lu-PSMA-617 (n = 234) | ARPI change (n = 234) |
|----------------------------|-------------------------------------|----------------------------------|
| Events, n (%) | 25 (10.7) | 59 (25.2) |
| Symptomatic skeletal event | 21 (9.0) | 54 (23.1) |
| Death | 4 (1.7) | 5 (2.1) |
| Median, months (95% CI) | NE (NE, NE) | NE (15.61, NE) |
| HR (95% CI) | 0.35 (0.22, 0.57) | |

177Lu-PSMA-617 in Castrate Resistant Prostate Cancer

OS analysis

OS: HR < 1 at third interim analysis

HR: 0.98 (95% CI: 0.75, 1.28)

Number of patients still at risk

| | | | | | | | | | | | | | | | | |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|----|----|----|----|----|---|---|
| 234 | 228 | 224 | 218 | 209 | 200 | 181 | 167 | 150 | 116 | 81 | 65 | 33 | 21 | 11 | 0 | 0 |
| 234 | 231 | 225 | 217 | 208 | 200 | 187 | 178 | 161 | 126 | 95 | 71 | 40 | 20 | 7 | 1 | 0 |

| | 177Lu-PSMA-617 (n = 234) | ARPI change (n = 234) |
|-----------------------|-----------------------------|-------------------------------|
| Median follow-up | 18.23 months | 18.40 months |
| Events, n | 104 (44.4%) | 112 (47.9%) |
| Median OS (95% CI) | 23.66 months (19.75, NE) | 23.85 months (20.6, 26.55) |

Crossover:
 134/234 (57.3%) in ARPI change group
 134/173 (77.5%) eligible patients

RPSFT crossover-adjusted OS analysis

- HR: 0.98 (95% CI: 0.76, 1.27)
- No difference versus the ITT analysis because the RPSFT model cannot adjust for confounding in the context of overlapping ITT curves

177Lu-PSMA-617 in Castrate Resistant Prostate Cancer

OS analysis

Treatment-emergent adverse events

| AEs, n (%) | ¹⁷⁷ Lu-PSMA-617 (n = 227) | ARPI change (n = 232) |
|---|---|--------------------------|
| Any | 223 (98.2) | 223 (96.1) |
| Grade 3–4 | 77 (33.9) | 100 (43.1) |
| Serious | 46 (20.3) | 65 (28.0) |
| Treatment-related | 7 (3.1) | 5 (2.2) |
| Fatal ^a (grade 5) | 4 (1.8) | 5 (2.2) |
| Treatment-related | 0 | 1 (0.4) |
| Leading to dose adjustment ^b | 8 (3.5) | 35 (15.1) |
| Leading to discontinuation ^b | 13 (5.7) | 12 (5.2) |

^aFatal AEs included: COVID-19, cardiac arrest, intestinal ischaemia, sepsis, cerebrovascular accident, coma, dyspnea, multiple organ dysfunction syndrome and treatment-related cerebrovascular accident.

^bAEs leading to dose adjustment or study treatment discontinuation included: dry mouth, thrombocytopenia, abdominal pain, acute kidney injury, anemia, back pain, neutropenia, platelet count decreased, sepsis, anaphylactic reaction, cerebrovascular accident, coma, dyspnea, fatigue, hepatic cytolysis, hyperaesthesia, spinal cord compression and tremor.

177Lu-PSMA-617 in Castrate Resistant Prostate Cancer

Treatment-emergent adverse events grouped by safety topics of interest

OS analysis

| Safety topic with combined AE incidence ≥ 5%, n (%) | All grades | | Grades 3–5 | |
|---|--------------------------------------|-----------------------|--------------------------------------|-----------------------|
| | ¹⁷⁷ Lu-PSMA-617 (n = 227) | ARPI change (n = 232) | ¹⁷⁷ Lu-PSMA-617 (n = 227) | ARPI change (n = 232) |
| Dry mouth | 131 (57.7) | 5 (2.2) | 3 (1.3) | 0 |
| Myelosuppression ^a | 81 (35.7) | 49 (21.1) | 28 (12.3) | 18 (7.8) |
| Hepatotoxicity | 29 (12.8) | 32 (13.8) | 12 (5.3) | 12 (5.2) |
| Renal toxicity | 15 (6.6) | 17 (7.3) | 3 (1.3) | 6 (2.6) |
| Dry eye | 14 (6.2) | 1 (0.4) | 0 | 0 |
| Fractures | 9 (4.0) | 13 (5.6) | 2 (0.9) | 7 (3.0) |
| QT prolongation | 4 (1.8) | 5 (2.2) | 1 (0.4) | 4 (1.7) |

^aincludes anemia, thrombocytopenia and neutropenia

Conclusions

- ^{77}Lu -PSMA-617 treatment prolonged rPFS versus ARPI change in taxane-naïve mCRPC patients.
- Secondary and exploratory endpoints also favored ^{177}Lu -PSMA-617 treatment.
- There was no difference in OS with ^{177}Lu -PSMA-617 versus ARPI change, but results are likely confounded by substantial rate of crossover.
- ^{177}Lu -PSMA-617 had a favorable safety profile and was well-tolerated.

Enzalutamide and 177Lu-PSMA-617 in Poor-Risk Metastatic CRPC, a Randomized, Phase 2 Trial

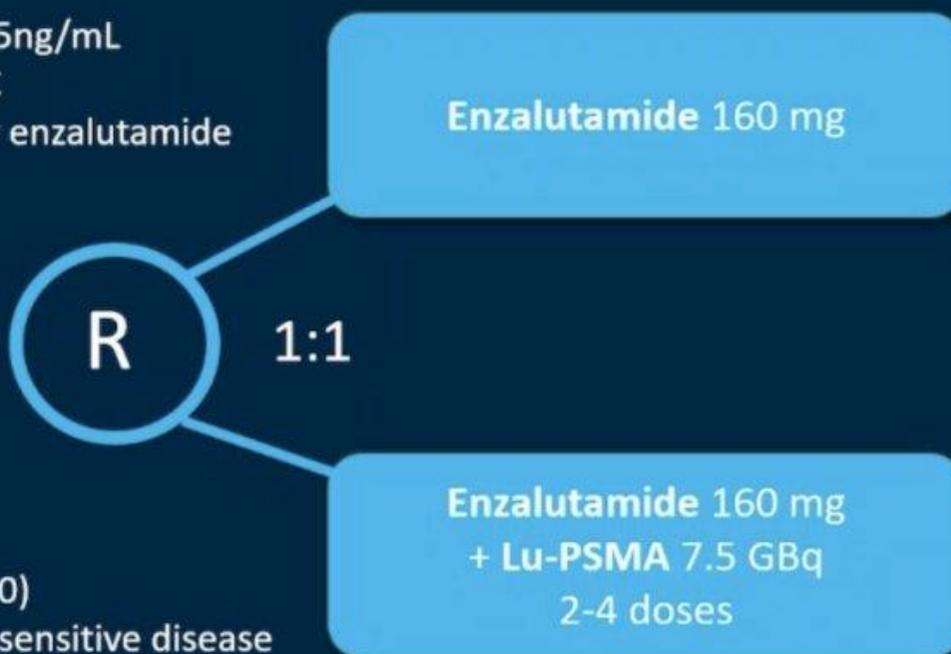

- Clonal Adjustment Theory
 - Enza Increases Androgen Resistance, Allowing Lu-PSMA to have Increased Activity

Eligibility

mCRPC with PSA rising and >5ng/mL
No chemotherapy for mCRPC
≥2 high risk features for early enzalutamide failure
Positive ⁶⁸Ga PSMA PET/CT

Stratification

Study Site
Volume of disease (>20 vs ≤20)
Early docetaxel for hormone-sensitive disease
Prior treatment with abiraterone

Objectives

PSA-PFS (primary endpoint)
Radiographic PFS
PSA response rate
Pain response and PFS
Clinical PFS
HRQOL
Adverse events
Overall survival
Health economic analyses

□ LUNAR Trial

^{177}Lu -PSMA in Oligorecurrent Prostate Cancer

Before ^{177}Lu -PNT2002

Recommended Doses for $\text{PTV}_{\text{Baseline}}$

| No. of Fractions | Dose per Fraction |
|--------------------|-------------------|
| 5 Fractions | 6-8 Gy |
| 3 Fractions | 9-12 Gy |
| 1 Fraction | 16-18 Gy |
| 1 Fraction (spine) | 16-20 Gy |

After 2 cycles of ^{177}Lu -PNT2002

Recommended Doses for $\text{PTV}_{\text{Adapted}}$

| No. of Fractions | Dose per Fraction |
|------------------|-------------------|
| 5 Fractions | 5 Gy |
| 3 Fractions | 8 Gy |
| 1 Fraction | 14 Gy |

Recommended Doses for $\text{PTV}_{\text{PSMAInterval}}$

| No. of Fractions | Dose per Fraction |
|--------------------|-------------------|
| 5 Fractions | 6-8 Gy |
| 3 Fractions | 9-12 Gy |
| 1 Fraction | 16-18 Gy |
| 1 Fraction (spine) | 16-20 Gy |

177Lu-PSMA in Oligorecurrent Prostate Cancer

Table 3 Study endpoints.

Primary endpoint

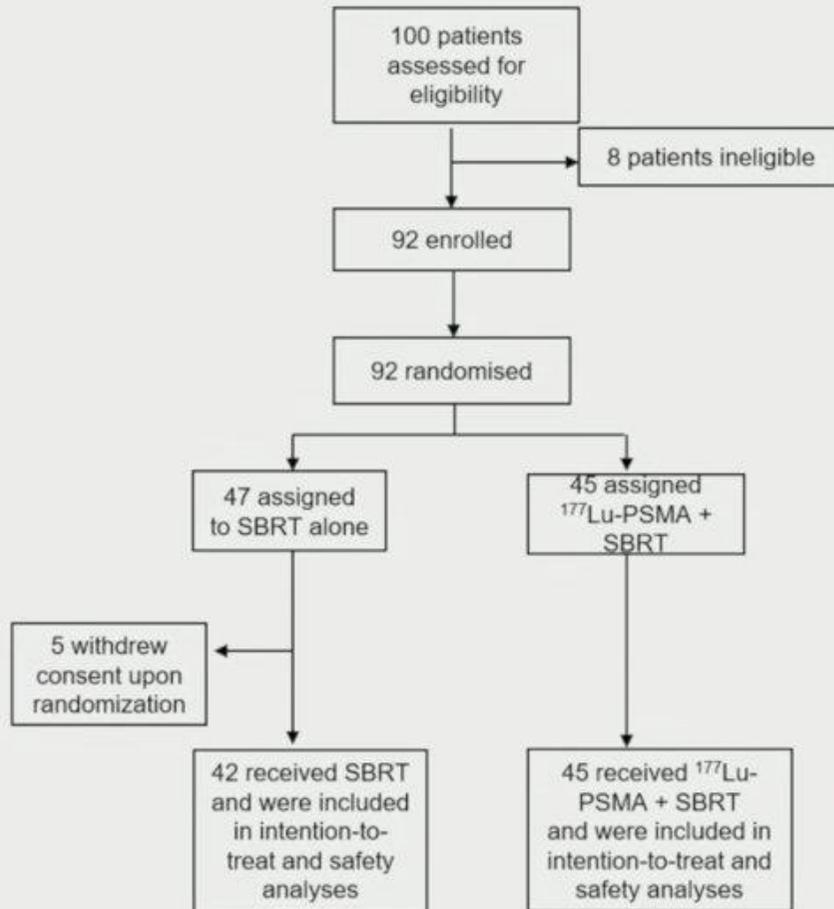

PSMA PET/CT-based progression, defined as either: (i) a new lesion on PSMA PET/CT with or without a serum PSA increase or (ii) local progression on PSMA (>30% increase in lesion SUV or increase of >20% in the sum of the longest diameter of all target lesions), regardless of new lesions, and a serum PSA increase*

Secondary endpoints

1. Progression as based on a 24-month PSMA PET/CT scan[†]
2. PSA-based progression*
3. Acute and late physician-scored toxicity (CTCAE version 5.0)
4. Patient-reported quality of life (Brief Pain Inventory scale)
5. ADT-free survival
6. Time to progression: Time from completing SBRT to the time of first documented tumour progression or new lesions by PSMA PET/CT or initiation of ADT
7. Time to local progression and new metastasis: Time from completing SBRT to identification of progression of treated lesions and a new documented tumour metastasis by PSMA PET/CT
8. OS: time from starting treatment until death from any cause
9. Local control and regional control based on by PSMA PET/CT
10. Duration of complete or partial response[‡]

The Future

- Adding two cycles of ^{177}Lu -PSMA to SBRT significantly improved PFS presumably by treating occult metastatic disease, without attendant increase in toxicity
- 64% of patients on the ^{177}Lu -PSMA + SBRT arm still progressed, suggesting that more cycles might have improved benefit

Alpha Therapy

• *Feuerecker et al, J Nucl Med 2023*

Alpha Therapy

□ Potential Benefits and Risks

□ Benefit

- Short Path Length

- Treat Micro-metastases (- PSMA Scan)

□ Risks

- Increased Xerostomia/ Marrow Suppression

- As We Treat Younger/Healthier Patients, Concerns About Late Toxicity Increase

□ *Hennes et al. Curr Opin Urol 2025*

The Future!

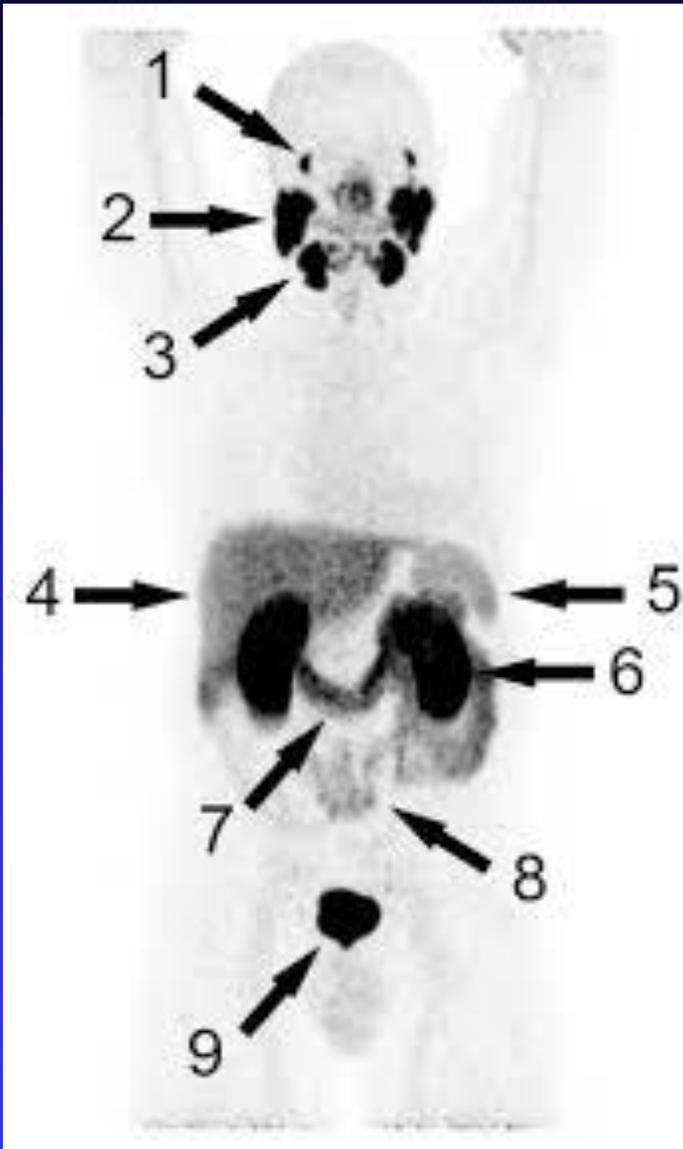

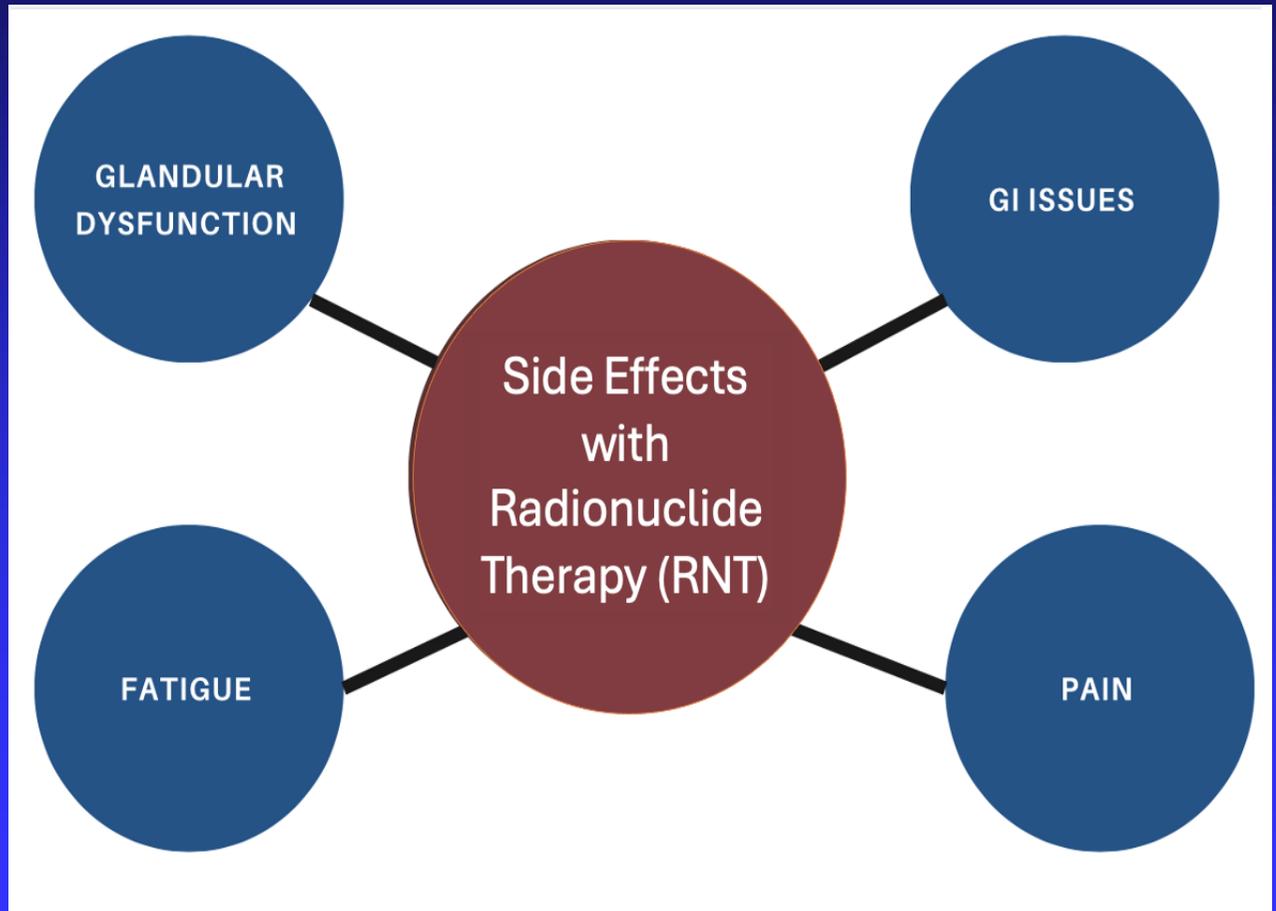

VISION, TheraP, LuTectomy and beyond – is there a role for lutetium therapy in biochemical recurrence?

David Hennes^{a,b,c}, Jasmin Weindler^{b,d}, Christa Babst^a, Marlon L. Perera^{a,e,f}, Declan G. Murphy^{a,f} and Renu S. Eapen^{a,e,f}

Radiolabelled Monoclonal Antibodies Targeting PSMA

- Variable Physiologic Uptake with Potential Differences in Clinical Efficacy and Toxicity

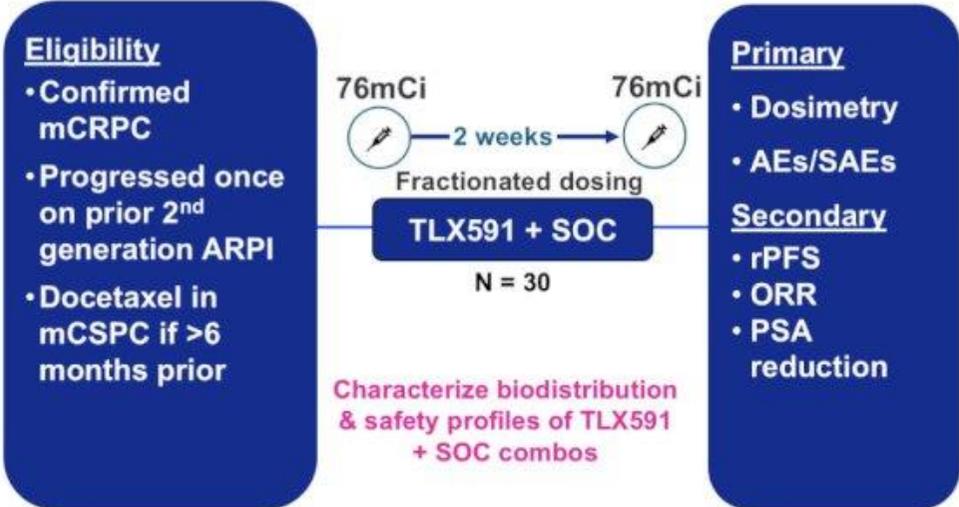

- Abusalem et al. Cancers 2023*

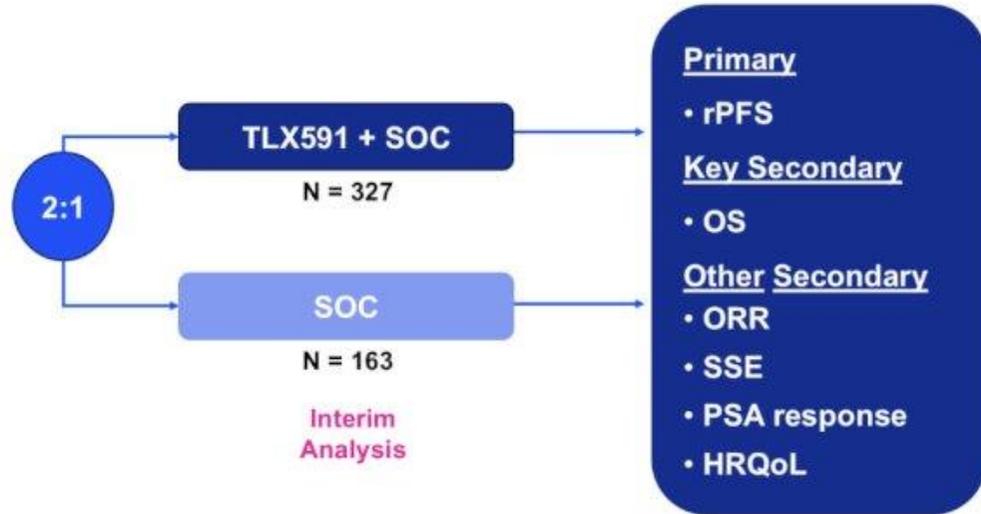

ProstACT GLOBAL: A Phase 3 Study of ¹⁷⁷Lu-Rosopitamab (TLX591)

Presented at ASCO-GU 2025

Part 1: Safety & Dosimetry Lead-In (n=30)

Part 2: Randomized Treatment Expansion (n=490)

SOC is determined by the Investigator:

- Part 1: Prior to treatment with TLX591
- Part 2: Prior to randomization

Change in planned SOC is not permitted.

SOC

- ARPI switch to abiraterone or enzalutamide
- Docetaxel

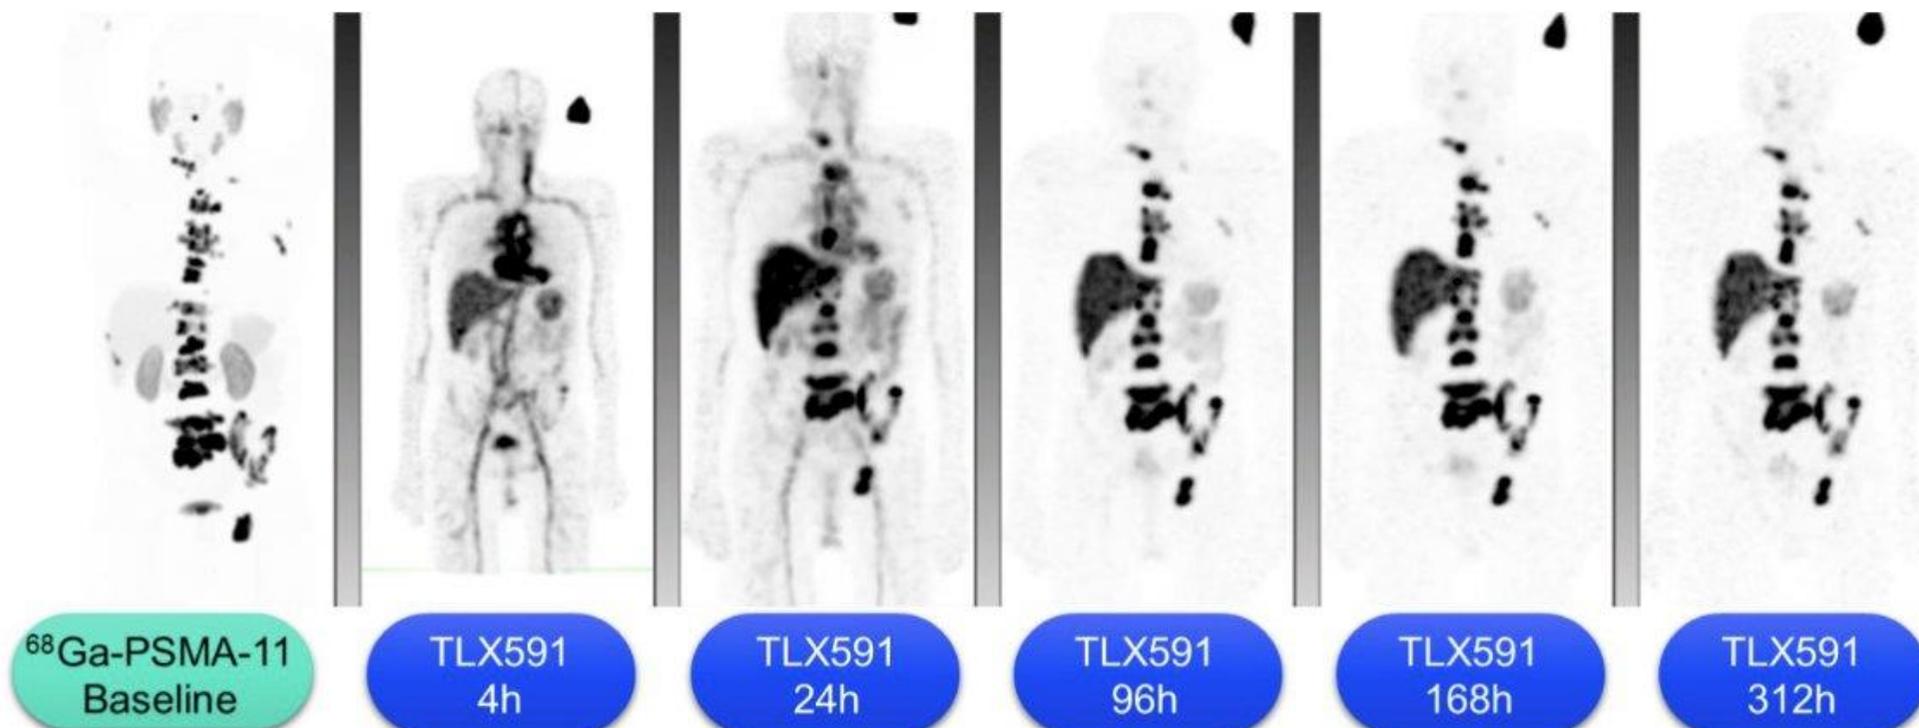

Stratification factors:

1. Chosen SOC: Docetaxel or ARPI (abiraterone or enzalutamide)
2. Disease burden (defined as: number of bone metastases on ⁶⁸Ga-PSMA-11 scan < or ≥ 10)
3. Prior docetaxel therapy

ProstACT GLOBAL: A Phase 3 Study of ^{177}Lu -Rosopitamab (TLX591)

□ Presented at ASCO-GU 2025

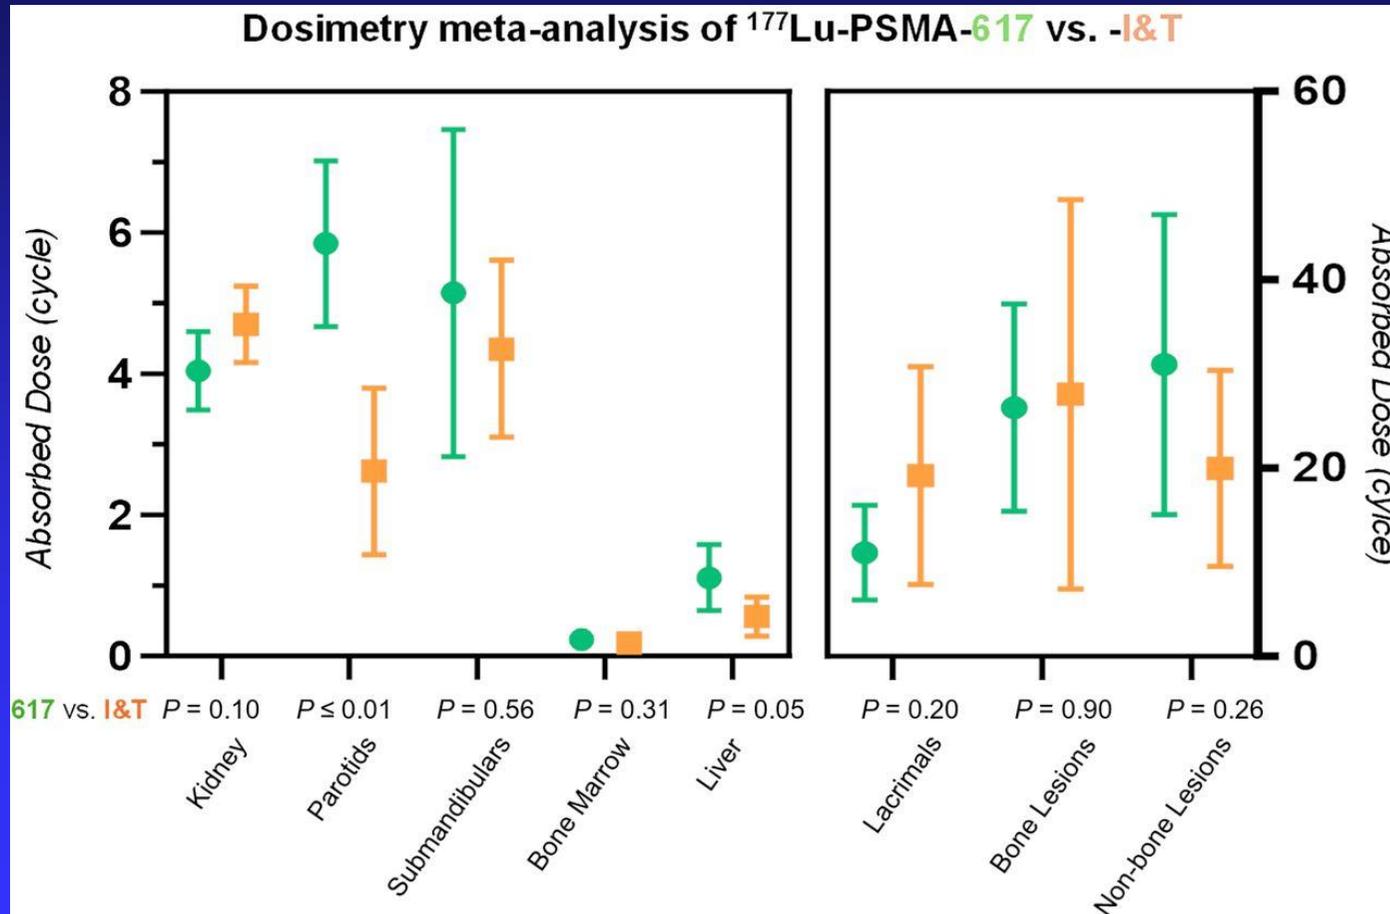

EXAMPLE: PATIENT WITH mCRPC HIGH DISEASE BURDEN

Patient representative scan - individual results may vary.

Comparative Dosimetry

- Will Become More Important as Treatment Moves to More Favorable Disease!

Radiolabelled Monoclonal Antibodies Targeting PSMA

□ Potential Benefits

- Significantly Different Targeting and Pharmacology from PSMA Receptor Binding Small Molecules
 - Primary Liver Excretion
 - High Internalization Rate Requiring Lower Radiation Doses
 - Longer Retention Requiring Fewer Injections and Less Radiation Protection Requirements
 - High Tumor Selectivity

Thank You for Your Attention!
